

Scenario:

You are a mother of three who struggles to balance a full-time job and taking care of the kids. One of your biggest challenges is making time to take care of dinner and after school activities for the kids. You would like an app that can keep track of what gets eaten in the kitchen and a list of what is currently in your pantry.

Task 1: Enter the pantry and sort by a different metric; “amount left.” Then, find the food with the least relative amount of food left.

Task 2: In the premium section, add an ingredient to a custom recipe and show how much.

Task 3: View the tailored lunch meal plan in the premium section.

Notes

Changes to make:

- Make the premium screen simpler
- Add more detail to the map
- Make custom recipes a basic feature

Keep the same:

- Sorting the pantry and recipes by different metrics
- Quick ordering for empty/expired foods
- Barcode entry for foods → pantry
